Copper equivalent (CuEq) calculations represent the total metal value for each metal, multiplied by the conversion factor, summed and expressed in equivalent copper percentage. These results are exploration results only and no allowances are made for recovery losses that may occur should mining eventually result. However it is the company’s opinion that elements considered here have a reasonable potential to be recovered. Long-term price assumptions and copper equivalent conversion factors are summarised below:

Cu equivalent formula = Cu (%) + (Co (ppm) x 0.0005) + (Au (g/t) x 0.7066)

Price assumptions – Cu (US\$3.36/lb), Co (US\$15.42/lb), Au (US\$1628/oz), Current market prices: 5pm 27/09/2011
